Description

Each store has a Settings page (route), which includes:

- Store name
- Store domain name (and allow users to connect / change the domain name - check how it's done in Funnel > Settings)
- Store path + URL generated from that path (in the storefront, the store URL must be visible and easy to click, so as Test mode).
- Default Currency of the store.
- Sharelink for the store (just like Funnel Settings).
- FavIcon
- Custom Codes
- Delete store option.
